

The VC-12 detachment with its highly specialized mission and skills has rendered a unique service. In addition to providing the hangar deck flotsam and jettison detail with a ready source of radomes we:

- 1) bore holes
- 2) bore holes in the holes
- 3) bore holes in the holes in the holes
- 4) (We have a capability for boring holes in the holes in the holes in the holes only our fourth plane is the Queen of hangar bay three.)

Since this is usually done on auto pilot, all hands are free to scan the scopes. The results are spectacular. Does CIC get you lost? We can do it quicker. And further. Do you have communications trouble? Try our handy dandy autocrat and listen to a real jam session. Are you looking for pilots with NERVES OF STEEL who can DELIVER THE WEAPON? With our wing rack MK IV rafts, we can bean a pilot in the water from 20,000 feet.

We also share Ready Five with VC-33, but nobody talks about that.
